#### **DETAILED ACTION**

#### **Drawings**

1. The drawings are objected to due to the following:

Fig 1, 3 and 6 are handwritten.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Pearce et al. (US 20020110155), hereinafter referred to as Pearce.

<u>Claim 1</u> Pearce discloses discovering the first node by the central controller (paragraph 0097);

Pearce discloses synchronizing the internal clock of the first node to the internal clock of the central controller (paragraph 0079);

Pearce discloses transmitting uplink data from the first node to the central controller in response to transmission authorization sent by the central controller to the first node (paragraph 0089, demand signal and feedback).

<u>Claim 2</u> Pearce discloses measuring a round trip delay from the central controller to the first node (paragraph 0101).

Pearce discloses transmitting downlink data from the central controller to the first node (paragraph 0101, the master then issues a MAT).

Application/Control Number: 10/091,141 Page 3

Art Unit: 2616

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pearce (US 20020110155) in view of Matsumoto et al. (US 6711264), hereinafter referred to as Matsumoto

<u>Claim 3</u> Pearce does not specifically disclose encrypting downlink data.

Matsumoto discloses encrypting downlink data (Col 3 lines 1-12).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to combine the encryptor disclosed within Elliot, into the Central controller as disclosed by Pearce. The motivation for this combination is to secure the transmission of data.

Claim 4, 5 Pearce does not specifically disclose the step of the first node periodically sending a different encryption key to the central controller, wherein the step of encrypting the downlink data comprises the step of encrypting the downlink data with the encryption key as received by the central controller from the first node.

Matsumoto discloses the step of the first node periodically sending a different encryption key to the central controller, wherein the step of encrypting the downlink data comprises the step of encrypting the downlink data with the encryption key as received by the central controller from the first node (Col 2 lines 11-25 and Col 3 lines 1-20 and Col 6 lines 29-35).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to combine the encryptor and key updating means as disclosed by Matsumoto, within the controller as disclosed by Elliot. The motivation for this modification is for a constant update of a key and secure transmission of data.

Application/Control Number: 10/091,141 Page 4

Art Unit: 2616

<u>Claim 6, 7</u> Pearce discloses the step of detecting, by the central controller, connection failure between the central controller and the first node (paragraph 0035). Furthermore, the system allows for routing, where any device on the routing path is able to detect a fault and recover. Fault detection is very common and well acknowledged within the art.

<u>Claim 8</u> Pearce discloses the downlink data and the uplink data being transmitted using IEEE 802.3 Ethernet standard packets (paragraph 0080).

<u>Claim 9</u> Pearce discloses the network being a passive optical network (paragraph 0028)

### Allowable Subject Matter

- 4. Claims 28-40 are allowed.
- 5. Claims 10-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher P. Grey whose telephone number is (571)272-3160. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau Nguyen can be reached on (571)272-3126. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/091,141
